**Re: Water for Quarry Mountain Ranch Irrigation Water Use Plan 2013
Irrigation Season**

Dear Ben:

I am writing on behalf of Richard L. Clissold Investment Company in response to your request of November 27, 2012 for an irrigation water use plan for the 2013 irrigation season. All irrigation use will be confined to the existing Quarry Mountain Ranch subdivision in accordance with the completed development and under approved change application 36389 (35-12443).

Therefore, all use of water under this approved change application will be for irrigation and stock water from the identified surface points of diversion. No wells will be used in connection with this water right.

Weirs remain to be installed, and we had suggested last year that you make a site visit to the project to help determine where the distribution office preferred to have the weirs installed. That still needs to be done, and given the late fall weather, there would still be time to get them in place before we get a lot of snow, if you can get up there in the next week or so.

Assuming the water is physically available in the sources of supply, all 375.08 acre-feet will be diverted from the combined approved points of diversion for irrigation, storage in the ponds and stock watering purposes. Measurements can be made once the weirs are installed, so that an accurate report can be provided as to the quantities of water diverted at the various points of diversion going forward. Clissolds would be willing to file an updated report at the conclusion of the irrigation season, if that would be of assistance to the distribution office.

The wells, as noted above, are not included as points of diversion in the change application. I believe the wells are currently capped, pending a decision as to whether they should be plugged and abandoned as per state regulation. Mr. Clissold still holds some domestic water rights that are tied to these wells as points of diversion, and he may decide to use one or both wells in connection with the retained water rights in the future. For now, these domestic

water rights are in non-use status and the wells are not in service.

The Clissolds will be ready to submit proof on this change once weirs are in place and measurements are available. Once the change has been perfected, the water right will be conveyed to the Homeowners Association and that entity will be responsible thereafter for annual reporting.

Let me know if you have any questions. If you do wish to make a site visit to provide information on where measuring devices should be located to best address the needs of the distribution office, please contact me.

Very truly yours,

CLYDE SNOW & SESSIONS, P.C.
